It consists of several components. The most important part is the .NET framework of Microsoft, which is included with MS Visual Studio. Once this is installed, you can start the program from the folder "C:\Program Files\ASTER". Another important part of the program is Asterisk, which is also installed with a freely downloadable package of Asterisk to this folder. This part will be described in more detail in the following chapter. FreePBX and Asterisk are used for basic telephony. Users can work with one or several extensions (number). If there are several extensions, they can be connected via a call queue. One extension can be used for the voice and another one for sending text messages. Each program or application requires an "entry". These entries are created during installation and are stored in the folder "C:\Program Files\ASTER\Data". The folder is responsible for all files, which are created for the program. Normally, the program stores user information in a file, which is named "config.cache". The content of this file can be erased or edited at any time. Now we will describe the individual parts of the

program more closely: Asterisk Asterisk is an open source telephony software. It is not an alternative to the PC based VoIP softwares. It has a more powerful audio routing feature than SIP. It is also easier to use for novices, because the functionality can be used only via voice menu. The program consists of several components. Asterisk can be started from the start menu (see picture below). The components of Asterisk are: receiver Channel manager Provider Dialplan Asterisk configurations are stored in the “C:\Program Files\ASTER\Data\config.cache” folder. This folder consists of several subfolders. The subfolder “extensions” is used for the user entries. If users want to edit their entries or put them to work, they must log in as a superuser. FreePBX FreePBX is a telephony software which allows you to create various applications and manage them like telephone numbers, calls, messages, etc. The program consists of several components. The most important part is the.NET framework which is included with MS Visual Studio. Once this is installed, you can start the program 82157476af
