I did the following: a.) Set the HTTP_PROXY, HTTPS_PROXY, HTTP_NO_PROXY, HTTPS_NO_PROXY environment variables. b.) Httpd.exe -install -accept Idap Idapd.exe -install -accept login logind.exe -install -accept mysql mysqld.exe -install -accept Idap Idapd.exe -install -accept login logind.exe -install -accept mysql mysqld.exe c.) I set the TrustedHosts and TrustedInterfaces variables to the same value as my proxy. d.) I also ran the following commands ipos40keygendownload makecert -icase `uname -s` -len 2048 `uname -r` `uname -m` -sky exchange -n "CN=https" `grep Ipos40keygendownload /etc/httpd/conf/httpd.conf` So I think there is some validation going on. A: The error says (from the web server): Access to this service is forbidden. It means your server is configured to allow remote (non-localhost) access. You need to configure it to allow only localhost (127.0.0.1) access. Open the Apache virtualhost configuration file at your Apache root folder and remove the line Options Indexes FollowSymLinks AllowOverride All for the https-directory. Note, you may also want to add the same line to the http-directory for the same reason. Q: Optional implementation in Swift Is it possible to implement an optional like in the following example? func someFunc() -> (String, Bool) { return (nil, true) } A: Use a default value for the Bool argument, and make the return type Optional: func someFunc() -> (Optional, Bool) { return (nil, true) } I recommend you to use a completion block as well: func someFunc(completion: (String, Bool) -> Void) { completion(nil, true) } And use it like: someFunc { (string, bool) in if
